## **Agreement Reached on Oil and Gas Activities in Hay-Zama Complex**

Following consultation with the public, government, industry and Dene Tha First Nation, Devlan Energy Ltd. and the Hay-Zama Committee today signed a "Memorandum of Understanding" (MOU) for oil and gas activities within the Hay/Zama Lakes Complex. The objective of the MOU is to reduce the time frame that oil and gas operations are conducted on the Complex and to improve environmental performance for those operations.

Cliff Wallis, President of the Alberta Wilderness Association, is pleased with the MOU: *"The Hay-Zama Committee has now signed agreements with all operators in the Complex. The MOUs are significant in that they recognize the environmentally sensitive nature of this internationally significant wetland. They commit the energy companies and government to time and access limitations on oil and gas activities in the complex. The Hay-Zama Committee process is a good model which could be used to guide the phase out of non-conforming uses from other protected areas in Alberta. It is gratifying to see the Dene Tha, Devlan Energy, conservation groups and Government of Alberta all coming to agreement on a responsible course of action."*

### Background

The Hay-Zama Lakes Complex is situated in the NW corner of Alberta, 50 km NE of Rainbow Lake. It is a large, diverse area encompassing marshes, open water, willow swamps, floodplain woodlands and wet meadows. It has been designated an internationally important wetland under the RAMSAR Convention and 486 sq. km were designated a Wildland Park under the Provincial Parks Act in 1999. The Complex provides habitat for a wide array of nesting and migrating waterfowl, shorebirds and marsh birds. During migration, up to 30,000 geese and 100,000 ducks use the area. Hay-Zama Lakes is an important traditional fishing and hunting area for the Dene Tha' First Nation at Chateh.

The Hay-Zama Committee was established in the 1980s to address issues related to oil and gas activities that were previously authorized in the Complex. It was re-activated in 1994 to cooperatively consult and resolve conflicts on the development of oil and gas reserves and protection of the area's cultural and natural heritage. The committee includes representatives from the Dene Tha First Nation, Alberta Energy and Utilities Board, Governments of Canada and Alberta, Ducks Unlimited, Alberta Wilderness Association and the energy industry, including Devlan Energy. The Committee has been committed to an accelerated winding down of activities that have a high potential to affect this internationally significant wetland while providing a reasonable timeline for the production of energy reserves in less sensitive areas. The committee received an Emerald Award in 1996 in recognition of its accomplishments and leadership.

Major successes for the cooperative approach used by the Hay-Zama Committee have been:

- 1996-EUB directive, ID 96-1, defined **access limitations** within the Complex's most sensitive areas
- 1999-2002-Memoranda of Understanding (MOUs) with Navigo Energy (formerly Ventus Energy) and Crispin Energy **reduced the time frame** that oil and gas activities, including existing operations, were to be allowed. It significantly improved environmental performance and committed to a phase out in high risk areas and a longer phase out in less sensitive areas.
- 1999-designation of the most sensitive parts of the Complex as a **Wildland Park**
- 2000-Addendum to 1999 MOU with Navigo Energy resulted in **no new footprints for oil** development and a **rapid phase out of oil in the high risk zone** as well as an accelerated phase out of oil and gas in the less sensitive sites. New gas footprints were offset by wellsite abandonments, resulting in no net gain of all footprints in the Complex. All oil activities have now been abandoned in the highest risk zones.
