Active Coal Leases in the Athabasca River Basin

Nine companies hold active coal leases outside of Jasper and within the headwaters of the Athabasca River. Many tributaries are designated as critical habitat for the endangered Athabasca rainbow trout. Numerous parks, protected areas, and recreation sites can also be found throughout the region. Downstream communities include Athabasca, Fort McMurray, Hinton, Whitecourt, and the Alexis Cardinal River, Fort McKay and Chipewyan Nations.
